

WELLCEM

► Product Overview

WELLCEM is a special well cement that can be used at 260 °C and 20.000 psi. It has excellent workability and mechanical properties for cementing deep wells, including geothermal wells and oil boreholes. It does not set up to a depth of 6.000 metres, and it shows appropriate strength for drilling procedures even at high temperatures and under high pressure.

► Advantages

- High sulfate resistance
- Appropriate setting time
- Appropriate strength at high temperatures and under high pressure

► Recommended Applications

- Geothermal Power Plants
- Oil Boreholes
